## FLEXACRYL HARD - LANG

### Features:
Lang Dental knows how important it is to maintain a level of commitment to your patients. Denture Reline can increase the longevity of denture retention and eliminate the need for new dentures. If a patient has ineffective dentures, his/her quality of life is diminished. We offer a variety of successful Denture Reline products to suit your patients needs, and to guarantee quick, accurate results every time.

Hard chair side reline acrylic resin. (Self Cure 30 minutes the complete process)

- **Powder**: Clear, Fibred Pink, Pink
- **Package**: 100g powder/118ml liquid + 10 ml Acrylic primer

### Benefits:
- **Co-polymer methacrylate - FLEXACRYL** Provides long-lasting, non-irritating chair side reline in less than 30 minutes
- **Patient-friendly - FLEXACRYL** Produces less heat with a bland formula that won't sting or burn the patient
- **Highly cross-linked - FLEXACRYL** Sets hard and strong without crazing

VERSACRYL REFILLS - THERMO-ADJUSTABLE RELINES - KEYSTONE

VERSACRYL Auto & Thermo-Adjustable Reliners

HEATCURE & SELF CURE SOFT RELINER (For Lab Use)

The Versacryl Reline Kit is not a regular "soft reline" material. It's a heat sensitive liner that softens in warm water. At body temperature, Versacryl has a cushiony effect and will yield to pressure and actually create better suction.

When heated, the reline becomes very soft and adaptable to soft tissues and teeth, over and over again (at room temperature the material will feel relatively hard to the touch).

Advantages & Features:

The rigidity of Versacryl controlled by varying proportion of the Softener and Hardener. This allows for an infinite range of consistencies, from very soft while heated to as hard as denture base.

Following polymerization, Versacryl remains thermo-elastic allowing it to be heat-softened in water for adaptation to softer tissues and teeth over and over again.

Versacryl's unique memory allows it to return to its original shape when heated.

Versacryl will chemically bond itself to any other acrylic product, either Heat Cure or Self Cure.

The product is a nice pink color that blends well with the denture base.

Because of the versatile properties of Versacryl, inventory doesn't sit on the shelf waiting for the next reline.

Superb technical support can offer technique tips and help.

The material has a slow rebound shape after deformation and keep denture in contact with tissue while chewing.

Versacryl can completely replace those ugly metal hooks on partial dentures.

It creates adjustable relines.

It solves the problems involved with stabilizing loose lower dentures.

Versacryl is great for many other applications dental and non-dental!
