Gingival Mask & Lab Putty

Mask Silicone

GINGIFAST - ZHERMACK

Laboratory A-silicone for gingival reproduction on models. Rigid type

Use:
* Gingival reproduction for implant prosthetic models. Indicated for direct technique
* Uses Pistol 1:1 or 4:1

Characteristics:
* Addition silicone formulation in a Cartridge

Advantages:
* Easy to Trim: permits accurate margin definition
* Indicated for implant prosthetics
* Precision and dimensional stability

# 118702 - Mfg # C100600

Very high viscosity C-silicone Putty

Use:
* Two-stage technique.
* Single-stage technique with two viscosities.

Characteristics:
* High initial flowability.
* Green color.
* Spearmint flavour.

Advantages:
* Reduces mucous compression in the phase of insertion in the oral cavity.
* Excellent hardness after setting.
* In the two-stage technique, it acts perfectly as a special tray.
* In double mixing, it adapts to the consistency of low viscosity fluid.
* Variable working and setting times according to catalyst quantity (indurent gel).
* Safe disinfection with Zeta 7 Solution and Zeta 7 Spray.

Technical data:
* ISO 4623 - ADA 19 - Type 0 Putty Consistency.
* Mixing time - 0:30 min.
* Total working time (23C/73F) - 1:15 min.
* Time in mouth - 3:15 min.
* Setting time (23C/73F) - 4:30 min.
* Compressive deformation (min-max) - 2 - 5%.
* Elastic recovery - > 98%.
* Dimensional stability (after 24 h) - < 0.2%.
