1. GENERAL PRODUCT INFORMATION

Polymers of methacrylate have become very popular in dentistry because of their easily processing capacity with relatively simple techniques. They have proved to provide the essential properties and the necessary characteristics to be used in oral restorations.

SELF-CURE NOVACRYL®: The composition of Self-cure (polymer and monomer) is the one that is used to repair provisional teeth, crowns and bridges, which is chemically activated by the addition of a tertiary amine to the liquid component. In this case, the use of thermal energy is not necessary.

2. INFORMATION ABOUT CHEMICAL COMPOSITION OF THIS PRODUCT

2.1. POLYMER COMPONENTS: Self-cure Acrylic (Type II)
   - Poly (methylmethacrylate).
   - Pigments.

2.2. MONOMER COMPONENTS: Self-cure Monomer (Type II).
   - Methyl Methacrylate.
   - Ethylene Glycol Dimethacrylate.
   - Chemical initiator (Amine type).

3. PHYSICAL PROPERTIES

The most relevant physical properties of Self-cure polymers are showed in the following chart:
### Parameters | Requirements | Experimental results
--- | --- | ---
Absorption | Not higher than 32 µg/mm³ | 19.50
Solubility | Not higher than 8.0 µg/mm³ | 5
Flexure Strength | 60 MPa Minimum | 65.4
Flexural Modulus | 1500 MPa Minimum | 3700
Residual Monomer Content | 4.5% Maximum (In weight) | 1.45

Other physical properties like color, polishing capacity, translucency, and porosity are evaluated qualitatively. These properties are inside accepted limits.

### 4. USAGE AND APPLICATIONS

The composition of Self-cure Novacryl®, (polymer and monomer) is the one that is used to repair provisional teeth, crowns and bridges.

The main characteristics of self-cure are the following:

- The period of time required for the repairing of different acrylic structures. This product allows an optimum working time for its manipulation.
- It does not require heat treatment for its polymerization process.
- It allows an easy polishing to recover its gloss.
- The polymer-monomer ratio is used as indicated, in order to avoid the possible vertical and linear contractions of the acrylic structure.

### 5. QUALITY ASSURANCE OF THIS PRODUCT
Acrylic resins are made from the highest quality raw materials through a completely standardized production process which conforms to ISO Standard 9001:2008 and ISO 13485.

The most representative machines used for quality control are the following:

**Water absorption and solubility:** The amount of water that can be absorbed by acrylic resins or the amount of weight that they lose when submerged in water is accurately tested. Acrylic is not soluble in saliva or in any other oral fluid.

**Porosity:** The surface of processed acrylics is free from imperfections and porosity.

**Flexural Strength and Flexural Modulus:** The degree of distortion suffered by acrylic resins under the occlusion forces that are applied during the use is verified in an Instron Testing Machine. The force supported by a resin until its fracture is also measured. This aspect ensures the good clinical performance of resins.

**Translucency:** An object placed at the opposite side of the test tube containing acrylic resin must be visible.

**Residual Monomer Content:** The amount of monomer that remains after the making of a prosthesis must be minimum in order to avoid possible irritations of oral tissues.

### 6. INSTRUCTIONS FOR USE

Self-cure acrylic Novacryl® Monomer must be mixed only with the Self-cure Novacryl® Polymer for preparing the acrylic used in repair provisional teeth, crowns and bridges, according to the current procedures and techniques in practice in dental laboratories or dental practice.
Acrylic Mixture Ratios:

Weight ratio: Two parts of Self-cure Polymer + One part of Self-cure Monomer.
Volume ratio: Three parts of Self-cure Polymer + One part of Self-cure Monomer.

Preparation of Acrylic Dough:

The acrylic dough is prepared in an adequate container (a dappen dish or a glass, silicon, or porcelain container).
The polymer is poured over the monomer in the indicated ratios.
The mixing is continually made crosswise during 30 seconds approximately in order to ensure the complete incorporation of polymer and monomer particles.
Put a lid on the cover the container to avoid the inclusion of air until the mixture reaches a thickness in a fluid phase.
Finally, Immediately empty the mixture in the corresponding area.

Work Time: This mixture allows a work time from 3 to 5 minutes approximately, at a room temperature of 23ºC ±2.

Cure time:

This mixture has a self-polymerizing average time of 10 minutes approximately. These intervals can vary according to the room temperature of the site.

Polishing:

Anatomy and contour are perfect as necessary according to the technical conventional dental. Carefully place the bridge or Crown on the support teeth and establish proper occlusion.

7. COMMERCIAL PRESENTATIONS

NOVACRYL®, Self-cure Powder

- POLYETHYLENE BOTTLES: 30g bottle, 40g bottle; 60g bottle (Box per 200 bottles); 125g bottle (Box per 100 boxes); 250g bottle (Box per 40 bottles); 500g bottle (Box per 24 bottles); 1000g bottle (Box per 15 bottles). Wide variety of teeth shades.

- POLYETHYLENE DRUM of self-cure acrylic powder per 10 and 20kg (unit)
TECHNICAL DATA SHEET: ACRYLIC RESINS SELF CURE NOVACRYL®
FTRA32-003

- METALLIC DRUM of self-cure acrylic powder per 125kg (unit)
- METALLIC DRUM of heat-cure acrylic powder per 125kg (unit)

- KIT: Cardboard Box with a 500g bottle of self-cure acrylic powder and 250 ml of self-cure acrylic liquid (Box per 24 KIT).
- KIT: Cardboard Box with a 1000g bottle of self-cure acrylic powder and 500 ml of self-cure acrylic liquid (Box per 7 KIT).
- KIT: Cardboard Box with a 60g bottle of self-cure acrylic powder and 55 ml of self-cure acrylic liquid (Box per 36 KIT).
- KIT: 4 bottles of self-cure acrylic powder per 40 g and 2 bottles of self-cure acrylic liquid per 55 ml.
- KIT: 8 bottles of self-cure acrylic powder per 40 g and 2 bottles of self-cure acrylic liquid per 55 ml.

NOVACRYL® Self-cure Liquid

- AMBER GLASS BOTTLES: 55ml bottle (Box per 150 bottles); 110ml bottle (Box per 100 bottles); 250ml bottle (Box per 50 bottles); 500ml bottle (Box per 25 bottles); 1000ml bottle (Box per 12 bottles).
- METALLIC DRUM of self-cure acrylic liquid per 200 L (unit).
- POLYETHYLENE DRUM of self-cure acrylic liquid per 1 gallon (Box per 4 unit).

- KIT: Cardboard Box with a 250ml bottle of self-cure acrylic liquid and 500g of self-cure acrylic powder (Box per 24 KIT).
- KIT: Cardboard Box with a 500ml bottle of self-cure acrylic liquid and 1000g of self-cure acrylic powder (Box per 7 KIT).
- KIT: 2 bottles of self-cure acrylic Liquid per 55 ml and 4 bottles of self-cure acrylic powder per 40 g.
- KIT: 2 bottles of self-cure acrylic Liquid per 55 ml and 8 bottles of self-cure acrylic powder per 40 g.
- KIT: 1 bottle of self-cure acrylic Liquid per 55 ml and 1 bottle of self-cure acrylic powder per 60 g (Box per 36 KIT)
EXPIRATION DATE

Novacryl®, self-cure Powder: Four (4) years.
Novacryl®, self-cure acrylic Liquid: Two (2) years.

STORAGE AND CONSERVATION MEASURES

Storage: Keep this product in a cool and well-ventilated place (Air in or around such place).
Keep it away from any flame or spark source. Do not smoke.
Keep it away from heat and direct sunlight.
Avoid contact with oxidants, acids, bases, and polymer initiators.
Do not store for long periods of time.
